

2024-019, La Perouse

14 May → 27 May
Still pink Tully kit = 297 mL filtered unless
otherwise noted. ☺

#5014A+B: mislabeled as 5015, relabeled on vial.

ALL CHL BEFORE EVENT 15: noticed that vacuum was pulling
at -15 Hg instead of -5, pump ~~was~~ sucking air
through adjustment knob when backed off. Not sure how
long this has been an issue but might need to swap
pump. — before event 15 happens!

#34: was an A, but is in fact a solo sample.

bot 3

#38 was NOT sampled → deleted from the Rosette sheet

LB07

#62A - spilled ~5 mL! Sorry!

#134, LB14 5m sample - air just blew filter on the floor!
It landed chl-side-up. Bit of dirty specs on
bottom of filter

#195 lost ~5 mL of sample

#204A sta LC02 Shoooshed the filter in the vial a bit

#219A Lost ~30 mL

Station LD11 - lots of fluff on these filters #249 - 252

Station LD08 #270B - Beware the pump ^{air} out! Filter on the
decks again, face up at least

↳ AND THEN we forgot about 271A & 269B and
filtered them multiple hours later! oops! ☹

#294, LD01 - dropped filter on counter, better side up. Flag 3

#354A+B → lots of Detritoids on filters

#373A → small transparent zoop (little copepod?) on filter

392 - lost 5mL

#421B - large copropod on filter (~ 5mm)

#421A -  same

#454 stn CSO4 ~ zoopl on filter
